

What's New at BRTT

Kent Lindquist

November, 2013

Papagayo, Costa Rica AUG

Overview

- Recap announcements
 - Personnel changes at BRTT
 - Solaris, Linux and Apple
- Operational changes at BRTT
 - Distribution, Installation, Licensing, Support, Project management, Manifest
- Antelope Python
- Antelope 5.3
- New products from BRTT

Recap Announcements

Recap: Personnel Changes at BRTT

- Kent Lindquist hired full time January 2012
- Dan Quinlan retired December 2012
- Kent increases BRTT's ability to undertake new development
- Kent is no longer available as a private consultant

Recap: Solaris, Apple, Linux

- Antelope 5.3 WAS THE LAST ANTELOPE RELEASE ON SOLARIS!
 - Ramp down in Solaris development
 - Solaris support through one year from 5.3 release
- Uncertainty of Apple hardware future
 - Cannot depend on Apple for enterprise-class hardware
 - Awaiting test of the new Mac Pro in December 2013
- BRTT fully supports Linux as a platform for enterprise-class systems
 - BRTT fully supports RHEL and CentOS 6.2 in Antelope 5.3 release

Operational Changes

Operational Changes at BRTT: Distribution

- Lots of problems in 2012 with CD publishing
- We are getting close to the CD size limit
- Kinematics is now responsible for CD (or DVD) publishing
- For 5.3, no more paper published manuals, including reference guides (they are web accessible)

Operational Changes at BRTT: Distribution

BRTT

November 2013

Operational Changes at BRTT: Installation

- We have incorporated an automated verification check to identify duplication errors and stop installation

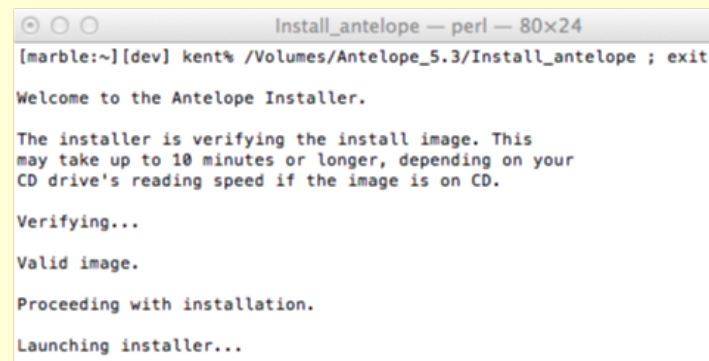

```
Install_antelope — dirsum — 80x24
[marble:~][dev] kent% /Volumes/Antelope_5.3/Install_antelope ; exit;

Welcome to the Antelope Installer.

The installer is verifying the install image. This
may take up to 10 minutes or longer, depending on your
CD drive's reading speed if the image is on CD.

Verifying...
```

```
Install_antelope — perl — 80x24
[marble:~][dev] kent% /Volumes/Antelope_5.3/Install_antelope ; exit;

Welcome to the Antelope Installer.

The installer is verifying the install image. This
may take up to 10 minutes or longer, depending on your
CD drive's reading speed if the image is on CD.

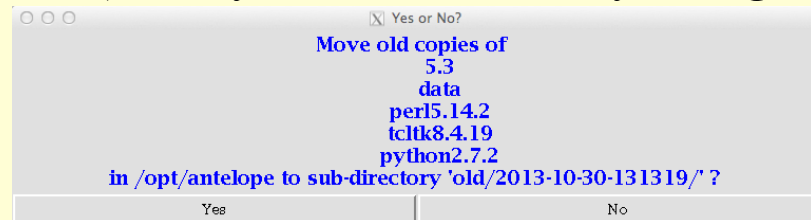

Verifying...

Valid image.

Proceeding with installation.

Launching installer...
```

- Installation has been simplified (always installs everything, moves existing directories)
- No more -64 in directory names (e.g. “5.2-64”). All software is by default 64-bit.

Yes or No?

Move old copies of
5.3
data
perl5.14.2
tcltk8.4.19
python2.7.2
in /opt/antelope to sub-directory 'old/2013-10-30-131319/' ?

Yes No

BRTT : This version is Antelope “5.3”
: Next will be Antelope “5.4”

November 2013

Operational Changes at BRTT: Licensing

- Previous Antelope licensing mechanisms were antiquated, difficult to administer (on both ends) and prone to abuse
- We are overhauling Antelope licensing mechanisms (a lot of this will be invisible to our users)
- We will continue to provide node-locked licenses for the foreseeable future (under some restrictions)
- We have a server-based replacement for subnet licenses in 5.3. We think this will eventually provide the most convenient and flexible licensing system for our users (floating licenses).
- We are using this year's experience to improve the new system for Antelope 5.4 next year
- We ask for your patience as we transition into a new licensing system

Operational Changes at BRTT: Support

- Improved support responses via email and web <https://brtt.zendesk.com>
- Always get an automated reply with a ticket number
- Provides BRTT staff with coordinated support response tools
- You can go to the web site to see current and old support requests
- You can access your support requests from any web browser
- Our web site (www.brtt.com) describes this in more detail
- **YOU ABSOLUTELY MUST USE**
support@brtt.com
- **WE WILL NO LONGER RESPOND TO SUPPORT REQUESTS TO OUR INDIVIDUAL ADDRESSES**

Operational Changes at BRTT: Project Management

- Project charters for each major project
- Requirements analysis for each major project
- Project portfolio management
- Team coherence
- Goals:
 - Continued regular delivery of new capabilities
 - Quality assurance
 - Triage of developments most valuable to the community
- Internal change

Operational Changes at BRTT: Software Manifest

- Developing internal manifest of software suite
- Contributed-code ‘nobuild’ area
- For Antelope 5.4:
 - New naming convention
 - Deprecated: *_dep
 - Preliminary: *_pre
 - Experimental: *_exp
- Auditing used and unused programs
- Identifying what is supported and by whom
- Wean out old code – drain on resources
- Focus on what’s being used
- Comments welcome on what to keep / decommission
- Progressively rewrite, slowly eliminate *wish* and *Perl/Tk*

Operational Changes at BRTT: Software Manifest

Antelope 5.3

Python

- Python: Object-oriented scripting language
 - <http://www.python.org>
 - Dynamic
 - Powerful
 - Extensible
 - Fast

About Python

- <http://www.python.org/about>:
 - Very clear, readable syntax
 - Strong introspection capabilities
 - Intuitive object orientation
 - Natural expression of procedural code
 - Full modularity, supporting hierarchical packages
 - Exception-based error handling
 - Very high level dynamic data types
 - Extensive standard libraries and third-party modules for virtually every task
 - Extensions and modules easily written in C, C++ (or Java for Jython, or .NET languages for IronPython)
 - Embeddable within applications as a scripting interface

Why Bother With Python?

- Heavily used “modern” object oriented scripting language
- Used extensively in Australia and US Antelope communities
- Can find young software developers who know Python (not so much the case for Perl and TCL)
- Has a large and comprehensive set of public-domain extensions, including scientific/engineering extensions
- Performs similar to Perl
- Unlike Perl, is inherently OO
- Unlike Perl, provides a simple path for Tk widget extensions
- Helps to prevent BRTT fossilization

Python in Antelope: History I

- Initial impetus: PASSCAL Instrument Center
 - Some pieces; Not a generic interface
- 2007: First open-source version, IRIS/ANF
 - Datascope; waveform plotting, orbtopo
 - Good proof-of-concept; lots of routines missing
 - Advice from Alex Clemesha, Rob Newman
- 2008: GA Consulting on Python
 - Ole Nielsen, Nariman Habili, Phil Cummins, Spiro Spiliopoulos, Michael Potter
 - Thin C layer with Python intelligence in script
 - Better architecture; warts and missing pieces

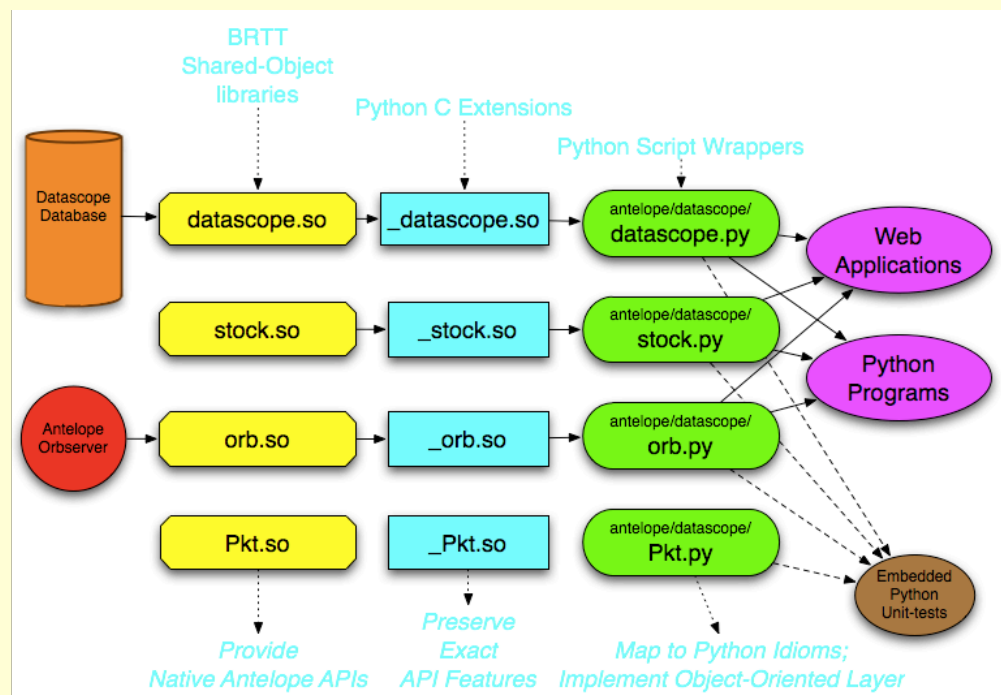

Python in Antelope: History II

- 2009: Added python orb, Pkt functions for UCSD
 - Experiment with AMQP for OOI
 - Filling out interfaces
 - open-source and integration issues
 - Discussions of heavy rewrite / expansion through GA
- 2010-2011: pre-release *Oryx*
 - Rtwserver, rtcache
 - Headed towards Lindquist Consulting, Inc. Product
 - Never materialized as independent product: KL->BRTT

Python in Antelope: History III

- 2012: BRTT, first commercial version.
 - Python interpreter shipped with Antelope
 - raw, scripted layers separate
 - Docs; functional basic toolkit
 - Peregrine
 - Solid raw layer; glitches in scripted layer, divergent open-source developments
- Beg. 2013: Script-layer rewrite by Jeff Laughlin, Laughlin Consulting
 - Pkt, stock, orb, brttpkt, elog
 - In Antelope 5.3
- Summer 2013:
 - More Jeff Laughlin rewrites: Datascope, coords
 - Advanced Tk utilities, buplot

Python Interface Structure

Multiple Layers

- Raw layer
 - `_`function naming convention: not for general use
 - Slavish adherence to C return values and structure
 - No Python intelligence
- Scripted layer
 - Intended for general user
 - On top of raw layer
 - Implements the ‘feel’ of Python

Antelope 5.3: Python

- Standard python 2.7.2 64-bit interpreter in Antelope 5.3 release
- Also included are a set of public-domain Python modules
 - numpy, matplotlib, twisted, setuptools
- Also included are a set of Antelope extensions to Python in the same vein as the TCL and Perl Antelope extensions
 - “raw” interfaces that closely following C calling syntax and use
 - New OO interfaces that follow standard python paradigms
- Most new GUI tools will be developed using python

Antelope 5.3: Python

- Rewrites by Jeff Laughlin, Laughlin Consulting
- Scripted layer libraries for Antelope 5.3:
 - Orb
 - Pkt
 - BRTTPkt
 - Stock (parts)
- Object Oriented
- Context Managers
- Iterators
- Heavily documented examples
- For Antelope 5.4:
 - Datascope
 - Coords

Requirements for project pyext:update;1

General goals:

- State-of-the-art Python interface for Antelope that hides C ugliness from Python programmer
- Appropriate object structure and behaviors
- Appropriate exception hierarchy and behavior
- Seamlessly handle memory management issues
- Seamlessly hide C-structure interaction, copying, passing, allocation/deallocation
- Succeeds at adoption by Python / Antelope community (inspires app development, not interface rewrites)
- Result must be straightforward to maintain and extend by BRTT (i.e. passes BRTT acceptance)
- Provides demonstration template, model for how to write wrappers for remaining Antelope libraries

ANTELOPE_PYTHON

NAME ¶

antelope_python - Overview of Antelope Python Interface

SYNOPSIS

```
sys.path.append( os.environ[ 'ANTELOPE' ] + '/data/python' )

import antelope.datascope as datascope
import antelope.stock as stock
import antelope.coords as coords
import antelope.elog as elog
import antelope.sysinfo as sysinfo
import antelope.orb as orb
import antelope.Pkt as Pkt
import antelope.brttpkt as brttpkt
import antelope.buhistory as buhistory
import antelope.buvector as buvector
import antelope.buplot as buplot
```

DESCRIPTION

The Python interface to Antelope provides the capabilities of a number of Antelope programming libraries in the Python scripting language. Each Antelope library is

Hyperlinked Sphinx Docs

`items()`

Returns a list of (key, value) tuples.

Return type: `list`

```
>>> pf = stock.ParameterFile()
>>> pf['foo'] = 'bar'
>>> pf.items()
[('foo', 'bar')]
```

`keys()`

Returns a list of the keys present in the parameter file.

Return type: `list`

```
>>> pf = stock.ParameterFile()
>>> pf['foo'] = 'bar'
>>> pf.keys()
('foo',)
```

`pf2dict()`

Returns a copy of the parameter file as a Python dict object.

Return type: `dict`

All primitive values are string type. Data structures are `dict` or `list` type. Automatic type conversion is not performed.

```
>>> pf = stock.ParameterFile()
>>> pf['foo'] = 'bar'
```

Online Refguides

Python Elog Interface

```
from antelope import elog
% man antelope_python
% man pythonelog_raw
elog.callback(replacement)
    Register a replacement
elog.complain(msg)
    Put a complaint message
elog.debug(msg)
    Put a debug message
elog.die(msg)
    Put a fatal message
elog.init(argv=None)
    Initialize the Antelope
elog.log(msg)
    Put a log message
elog.notify(msg)
    Put a notification message
```

Tcl Datascope Interface

This Page

Python Datascope Interface

```
import antelope.datascope as datascope
```

```
% man pythondatascope
```

```
% man pythondatascope_raw
```

Opening a Database

```
datascope.dbopen (dbname, perm = 'r')
```

```
datascope.Dbptr (dbname, perm = 'r')
    return database pointer to the database
```

```
datascope.Dbptr ()
    create a database pointer filled with dbINVALID values
```

```
datascope.Dbptr (list)
    create a database pointer from a list or another Dbptr
```

```
datascope.dbcreate (filename, schema, dbpath = None, description = None, detail = None)
    create database descriptor file filename with specified schema, dbpath, desc and detail
```

```
datascope.dbtmp (schema)
    return database pointer to temporary database with specified schema
```

```
datascope.dbclass (db)
```

Python-based Tool for Monitoring Memory

orbbrtd

- **orbbrtd** is a complete rewrite of **orbmonrtd**
- Rewrite of old TCL/Tk script as a Python script
- Adaptation of *buplot* *bptrace* Tk canvas item extension available in python
- Provides enhanced trace amplitude plotting options (color, log scales, etc.)
- Provides capability to plot color-contoured spectrogram style time-scrolling spectra plots
- Introduces a number of new features, including dynamic automatic channel configurations
- First stage in converting **dbpick** display graphics

Orbrtd: colorscale display

orbtrd: spectrogram display

Antelope 5.2 **dbpick** Capabilities

- Complete rewrite of underlying data handling middleware
- Overall data access performance increased by a factor of 10+ (with caveats)
- Highly dynamic response to changing underlying database
- New type-in commands, **dbrefresh** and **dbreopen**
- New type-in command, **batch**, to increase graphics performance and to control display flashing when changing events
- Can keep a **dbpick** window open continuously when running **dbevents**
- First phase toward a complete rewrite of **dbpick**

Future Antelope Development

- **orbbrtd**
 - Add display of arrivals and detections
 - Enhanced autoscaling
- **dbpick**
 - Next phase is to migrate the GUI to our new tk-based graphics extensions
 - Develop new **dbpick** main program as a python script
- **dbloc2**
 - Kent will head a complete rewrite
 - Taimi Mulder and Trilby Cox led comments/suggestions solicitation for new **dbloc2**
 - Python script with embedded **dbpick** functionality
- **dbe / dbhelp**
 - Jeff Laughlin will rewrite

New Products from BRTT!

November 2013

Peregrine

Web enhanced version of Antelope

Bighorn

Strong motion/structure monitoring
version of Antelope also including
web enhancements

Peregrine

- Python-based web server
- Along with the various python extensions, provides a comprehensive toolkit for developing custom web servers that are highly integrated into the Antelope environment (configuration, connectivity, etc.)
- Along with other components, will be sold as a separate BRTT product or as an add-on to existing Antelope site licenses
- Current version is not ready for release. We are probably one year away from a production version.

Bighorn - orbsmrsp

- New ability developed for producing continuous time-dependent strong motion response spectra
- Expanded floating point data representations within ORB packets and Datascope waveform files
- Pf ORB packets to represent time continuous strong motion response spectra
- Provides a very fast method for computing continuous time-dependent response spectra for large numbers of channels

Bighorn: architecture

Bighorn: overlay of new vs traditional processing

Thank You

css3.1 v. 5.2

- New incremental changes to **css3.0** as we discussed last year
 - Mainly increased lengths of various attributes
 - All id attributes from 8 to 12 characters
 - All epoch times have microsecond precision
 - dnorth, deast in site have 5 digits precision
 - lat, lon have 7 digits precision
 - Increase dir to 80 characters and dfile to 48 characters
 - Increase sta to 8 characters and chan to 14 characters
- Increased sta attribute size means that SEED to css aliasing can be done with consistent snet_ssta type naming convention
- Intention to use **dbconvert** to convert from **css3.0** to **css3.1**
- New gsn_demo uses **css3.1**
- Addition of prefmag attribute in event table
- Not all critical programs are compatible were compatible

css3.1 v. 5.3

- Lots of problems with initial implementation
- Initial implementation hard wired SEED to css name aliasing and dropped snetsta and schanloc tables
- This insured incompatibility between existing **css3.0** and **css3.1** databases
- Cannot use **dbconvert** to convert from **css3.0** to **css3.1**
- Fixed problems by re-introducing snetsta and schanloc tables. Issues described in **cssconversion(5)** man page. Helper script, **cssconvert**, provided for dealing with changes in SEED to css name aliasing during conversion.
- New gsn_demo now goes back to using **css3.0**
- Now works with all critical programs
