rtgit

- Coupling of real-time systems with *git* content tracking

- Track Antelope real-time system configuration
  - Core debugging question: *"What Changed??"*
  - Help solve the *"Nothing Changed"* puzzle

- Rapidly redeploy systems on new machines

- Track stable and semi-stable files; don't track "outputs" or "state"

rtgit subcommands

- *rtgit **init***
  - executed from within rtexec(1) run directory
  - Zeroth-order setup
- *rtgit **autoupdate***
  - Automatically run rtgit periodically
- *rtgit **diffsince***
- *rtgit **tarball***
- Standard *git* commands in the run directory
